1. let the Zoo Emp table.

ZperName	ZPerId
lalith	19081
Venu	19082
Any	19083
Bobby	19084

the given query output is "Error" because there doesn't

exist a 3rd column in the given table.

2) Employee Table

EName	EPolicy
Anu	3
karan	5
Jai	3

Query : Select * FROM employees where select eEName from

Employee (select e_1.name FROM Employees e_1, Employees e_2

where e_1. Insurance = e_2. Insurance);

4) Yes, sql drops all related objects inside table like. Constraints, indexe, columns, but i dont think that the server really drops them.

5. Select * from Std-Info-Details where Std-Id %3 = 0

With this Query we get the Std-Id values as odd values

6) Select Top 0 * Into Empty-table from University table.

7 by this Query it copy's top 0 from the university table.

Into the Empty_table.

7) Delete SUB FROM (selet Row-Number () over Partition by

EmpId, EmpName, EmpSSN ORDER BY EmpId) cnt FROM

Employee) SUB WHERE SUB.cnt >1
